DESCRIPTION

The Polnet[®] ACP is an industrial grade automatic call processor designed to eliminate dedicated phone lines by expanding the number of devices you can connect to a single line.

When installed, the Polnet ACP automatically answers the line and determines where each call should be routed. "Data Polling" calls that produce the proper security access code (DTMF tones) get routed to the assigned modem or device for each code.

The Polnet ACP also detects CNG tones for automatic routing to fax equipment. If no tones are detected, the Polnet ACP routes calls to a phone or phone system.

Programmable security access codes for each device port lets the Polnet ACP keep your information safe from unwanted callers or hackers.

BENEFITS & FEATURES

- Security
- Save Money
- Increased Connectivity
- Auto Fax Detect
- Dual Surge Protection
- Barge-In Protection
- Multi-Port Polling
- Line Sharing
- 3, 5, and 9 Port Models
- Remote Diagnostics
- Fully Programmable
- Call Grab

RETAIL PACKAGE INCLUDES

- 1 Polnet ACP
- 1 Power Supply
- 1 7ft. Line Cord
- RJ-31 Adapter
- Wall Jack Mounting Hardware
- Installation Manual

The Polnet[®] ACP is made in the USA.
