- 230V Version Available

### DESCRIPTION

Direct your distinctive ring calls to the phone(s) or device(s) you designate with any product from Multi-Link's SR™ Selective Ring Call Processor series.

Once installed on your home or office telephone line, the SR Call Processor "listens" to incoming calls to determine ring pattern. The SR series is great for separating business from personal calls, fax from voice calls, TDD from voice calls, etc... Your fax number rings the fax, your voice number rings your phones, etc...on a SINGLE phone line.

The SR2 is designed for the usual two distinctive ring services offered by most phone companies. The SR3 can process three separate distinctive rings as offered in some enhanced phone services. Both the SR2 and SR3 offer a barge-in protection function.

All SR products feature the Smartware™ embedded software that "learns" your phone company's specific distinctive ring patterns.

### BENEFITS & FEATURES

- Eliminates Need for Additional Dedicated Lines
- Works with call forwarding and call waiting.
- No Misdirected Calls
- 1-800 Technical Support
- Individual phone numbers for your fax, voice, and/or modem
- Saves Money

The SR-2 and the SR-3 are made in the USA.
