with your questions or to order by phone.*

DESCRIPTION

The Versa-Link™ is an automatic call processor that routes calls based on CNG and DTMF tones. DIP switches located on the device let you easily change programming.

The output jacks are labeled Device 1 and 2 (250 model) and 1, 2, and 3 (300 model) leaving the user free to use any combination of communication devices. A 6-port model is also available.

Barge-in protection keeps your data transmissions free from interruption. A busy signal is heard when other devices attempt to use the outgoing line.

BENEFITS & FEATURES

- Security
- No Misdirected Calls
- Caller ID Compatible
- Eliminates Need for Dedicated Lines
- Data Integrity
- 1-800 Tech. Support
- Line-Sharing
- Automatic Fax Detection
- Surge Protection
