

# Take control of your network with the *Internet* POWER STONE

## Critical Control Features:

- \* 120VAC or 240VAC in one unit
- \* Various methods of reset: telephone, web browser, heartbeat
- \* Local control by RS-232
- \* Automatic reset with Heartbeat software. Includes event log.
- \* Remote control by telephone, web browser
- \* International compatibility

**The IPS is a versatile AC power controller that provides reset capability to unattended remote equipment.**

The IPS provides various methods of initiating an AC power reset to meet any requirement for complete in *and* out-of-band network control.

**By Telephone:** The basic reboot function involves an incoming POTS line and a connected AC device. An incoming call will trigger an auto reboot, based on user-defined number of rings.

**By Heartbeat:** The IPS can work with heartbeat software that will automatically reboot a computer when a problem occurs.

**By Web-browser:** The IPS can be controlled by a master control unit that is IP addressable accessible via the internet. Password protection and power status feedback are available.

**REDUCE DOWNTIME, REDUCE SERVICE COSTS, REDUCE STRESS!**

## Basic Reboot Operation

## IPS SPECIFICATIONS

Dimensions	4.5" W x 3" D x 1.25" H
Connectors	(2) RJ-11 Telco/Control; (2) IEC-C13/14 (AC); (1) DB-9 Female RS-232
LEDs	(3) Power, Status
Switches	(1) Pushbutton reset
Bell	None
Cables	(1) 6' DB-9 Female (1) 6' RJ-11 Phone Cable
Adaptor	None
AC Power	115V/60Hz, 10 Amps to 220V/50Hz, 6.3 Amps

## MARKET APPLICATIONS

### Out-of-Band Network Management for:

- \* Servers
- \* Modems
- \* Routers
- \* Gateways
- \* ATM's
- \* Internet Kiosks
- \* HVAC Panels
- \* Surveillance and Security systems
- \* Voice Mail, KSU systems
- \* Unattended PC's
- \* *ANY REMOTE AC EQUIPMENT!!!*

### Optional products:

#### For Network and Web-browser control:

The **ICM** is a web based network controller for the IPS (base unit). It connects to an ethernet network as a normal network device and operates like a mini-website. It can be accessed with *any* web browser.

- \* **Optional RS-232 or analog port interface**
- \* **Easy menu control selections**
- \* **Password protected**
- \* **Automatic or manual URL set-up**
- \* **External relay control**

#### Award Winning Product Line:

**The Stick** - 1x4 phone line sharing device

**ACP Series** - Industrial grade line sharing device in 3, 5, and 9 port configurations

**Stick II** - 2x5 auto call processor

**The LineHunter** - 4x12 call processor

**SR Series** - Selective ring call processor

**The Power Stone** - Call activated AC power reboot device; Manual and automatic control

**Push Button Reset** - Reset device for PC's with ATX style motherboards

#### For Automatic Control (Heartbeat):

The **Heartbeat Rebooter** works *in conjunction* with the IPS to automatically cycle power to attached hardware when a locked condition is detected. Windows 95/98/ME/2000/XP

- \* **Detects lock-up in 30 secs.**
- \* **Event log tracks time and date of reset**
- \* **Reset time is user defined**
- \* **Serial port connection**

*Note: Alternate models* reset by direct jumper pin connection *or* push button interface.

#### About Multi-Link

**Multi-Link, Inc.** is a Kentucky based manufacturer and marketer of telecom and MIS equipment specializing in phone line-sharing and AC power control devices. Our product line focuses on time, cost, and labor saving remote maintenance that benefits virtually any market and application that uses phone or TCP/IP access. Let us show you how we have saved *hundreds* of companies *thousands* of dollars in our 16 years of operation.
