- Surge Protection
- Compatible with TTY/TDD Phones
- Works with Key Systems
- Compatible with Telephone Company Voice Mail

Selective Ring Call Processor Series

• ***Maximize*** your "Distinctive Ring" service
with a Selective Ring Call Processor!

Multi-Link is proud to offer a series of **Selective Ring Call Processors**. These unique products work hand-in-hand with the "Distinctive Ring" service from your local telephone company. The SR series helps create a flexible communication system for up to three different phone numbers.

• ***What's "Distinctive Ring" you say?***

Your local telephone company offers an inexpensive service, allowing you to receive additional phone numbers along with the original phone number on your current phone line. No additional wiring is necessary. The telephone numbers are differentiated by their signature or "Distinctive Ring" — a pattern of long and/or short rings. For more information about "Distinctive Ring", contact your local telephone company.

• ***'Distinctive Ring is great, but my home office phone rings when a call comes in on our personal number. It's disrupting.'***

The SR Call Processor lets you designate the phone(s) or device(s) you want to receive the call. For maximum control, install the SR where your telephone line comes into your home or office. Imagine having personal calls only ringing the household phones and office calls only ringing the home office phone. The SR lets you control every phone in your entire home or office and enjoy the benefits of "Barge-In" protection!

• ***How does it work?***

When a call comes in, the SR Call Processor "listens" to determine the ring pattern of each call. The SR then immediately routes the call to the phone or device you have designated, without ringing other phone(s) or device(s) on the same line!

Small Office/Home Office

If your home office shares a telephone line with two or three numbers, then the SR Call Processor is the tool you need. Keep disruptions to a minimum and enjoy barge-in protection. Your personal calls will be sent to your personal phone, business calls will be sent to your business phone. If you're not in your home office, your office answering machine will take the message. Now, no one in the household will be bothered and the message will be recorded.

Around the House

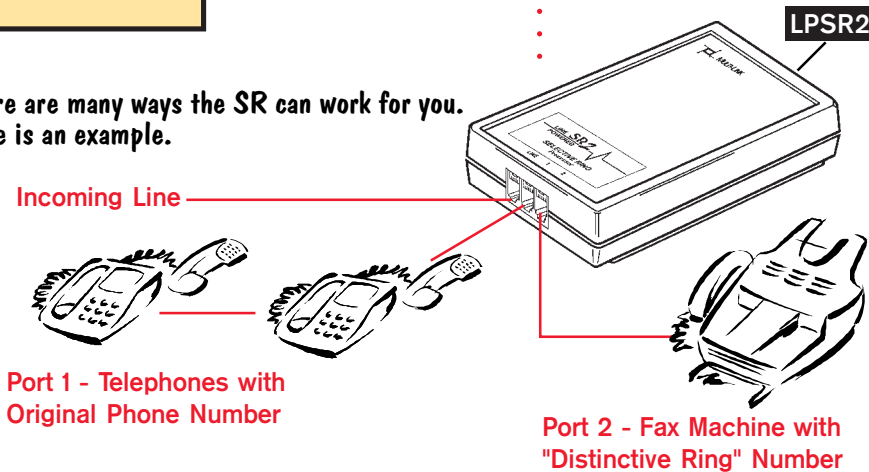

Use the SR Call Processor to route calls to your children's, spouse's or roommate's phones. Calls placed to the first number ring only your phone. Calls placed to the second (and third) numbers ring only your children's or roommate's phone. When the second and third numbers are called, your phone won't ring! Avoid interruptions while you are on the phone with barge-in protection!

Compatible with TTY/TDD Devices

All three SR models are compatible with TTY/TDD devices. Route TTY numbers directly to TTY phones or modems. It's as if each device has its own dedicated telephone line, without the cost! Save hundreds of dollars a year in phone bills, without sacrificing privacy and efficiency!

There are many ways the SR can work for you. Here is an example.

Three to choose from!

SR2 Call Processor

Designed for subscribers of the telephone company's "Distinctive Ring" service. The SR2 supports two phone numbers over one telephone line. Compatible with tone or pulse dialing phone systems. Works with most all modems, answering, dictation and fax machines. Compatible with call packages offered by local telephone companies.

SR3 Call Processor

Designed for subscribers of the telephone company's "Distinctive Ring" service. The SR3 supports three phone numbers over one telephone line. Compatible with tone or pulse dialing phone systems. Works with most all modems, answering, dictation and fax machines. Compatible with call packages offered by local telephone companies.

LPSR2 Call Processor

This unique product is powered only by the telephone line. No AC outlet required! Designed for subscribers of the telephone company's "Distinctive Ring" service. The LPSR2 supports two phone numbers over one telephone line. Works with most all faxes, modems, answering and dictation machines.

"Distinctive Ring" services go by different names depending on the telephone company.
