DESCRIPTION

The TeleVoIP Stick™ is a residential VoIP communication system that accesses Voice over Internet Protocol technology with existing phone equipment. You will enjoy new levels of convenience, choice, and control in everyday communications.

The TeleVoIP Stick™ blends VoIP access with the user's current land line (POTS) phone service, thereby optimizing call options without changing normal calling habits. The TeleVoIP Stick has two main components: the Control switch (hardware) and "TeleVoce Connected" software.

The control switch converts analog phones into VoIP phones without losing analog features. The software program runs on the user PC and acts as a "decision engine" which can access either the user's VoIP provider or the land line. The rules for outbound calling are user-defined.

The TeleVoIP Stick™ provides the user with land line access in the event of a 911 call, power outage, or service outage. The control switch defaults all calls to the POTS line during these events, ensuring the traditional access to 911 call centers.

BENEFITS

- Lets you add VoIP to existing home phones
- VOIP without the necessity of the PC "softphone"
- Easy VoIP for mainstream consumers
- Provides Reliable Emergency 911 Service
- PSTN reliability and VoIP savings and features
- Free 1-800 Tech. Support
- Evolving, upgradeable PC platform
- Computer is a personal communication center
